2. Functional Requirements

- User authentication (signup, login, logout)
- Create, view, update, and delete degree plan entries (courses, requirements)
- Add, edit, and delete checklist items (e.g., upload documents, mark tasks done)
- Lookup transfer credits using an external API and save results to user profile
- Compare educational benefits (GI Bill, Yellow Ribbon) across schools
- Save and resume degree plans during deployment interruptions
- Dashboard navigation between major features (Degree Plan, Transfer, Benefits, Checklist)
- Data persistence using SQLite/PostgreSQL backend
- Input validation and error handling (prevent duplicate courses, invalid entries)
- Secure session handling and logout timeout

3. User Stories

- As a student veteran, I want to log in with my VA or school credentials, so that I can securely access my academic and benefits information.
- As a transferring student, I want to enter my completed courses and military training, so that I can see how many credits will transfer to my new school.
- As a service member who may deploy, I want to pause and resume my degree plan, so that I don't lose my progress if I need to step away temporarily.
- As a veteran using the GI Bill, I want to compare benefit eligibility at different schools, so that I can make the most cost-effective decision.
- As a student balancing family and work, I want to see a clear dashboard of tasks (checklists, documents needed), so that I can stay on track without confusion.

4. User Journey Flow

- User opens the app → sees Login screen.
- Logs in successfully → redirected to Dashboard.
- Dashboard shows Degree Plan, Transfer Credits, Benefits, Checklist.
- User selects 'Transfer Credits' → inputs prior courses & training.
- System displays transfer equivalency & degree progress impact.
- User checks 'Benefits' → compares GI Bill & Yellow Ribbon across schools.
- User updates plan → saved to database.
- User checks 'Checklist' → marks tasks completed and uploads documents.
- User logs out → session ends securely.
